

GROUTING

Grouting is a widespread term and can mean a variety of things.

It can mean the injection of grout in the ground, under controlled pressure, in order to fill the spaces that exist between soil particles. It can also mean the injection of grout in rock, under controlled pressure, in order to fill the existing cracks, crevices, and joints in the rock formation.

It is best practice to conduct an onsite grout mix testing program at the onset of any project in order to develop a selection of grout mix formulations that will best serve each project and/or application.

ACT provides a wide array of grouting solutions, allowing us to offer our clients innovative solutions that best suit their needs.

- ▲ Chemical Grouting
- ▲ Compaction Grouting
- ▲ Compensation Grouting
- ▲ Grout Curtains.
